Trading rules for intra-day position trading:

- **Dual number** could be used for long position when price trades above it. Also it could be used for short position when price trades below it. Inexperienced traders should not trade this number.
- For intra-day position traders, you have the potential to capture a big move if you are trading in the right direction. If you get stopped out two times in one direction, especially during a strong trend day. **STOP** trading for rest of the day.
- If you are a scalping trader, **DON'T** hold your position too long if you trading against the direction of a strong trend.
- If you are in right direction of the market movement, you can hold your position until price hit opposite major resistance or support level target.

4. COMMENTARY

Option game started early on Monday. ES ran up higher level to complete its symmetrical bullish pattern at 1212.25 level (Sorry Guys, I didn't find out this yesterday. Only now), and then did its 61% retracement. But nothing changes on daily chart. Price still trades inside uptrend channel. But it did make higher high and higher low in recent three days. If today ES continue holding 1201 level, price could bounce again.

5. TODAY'S TRADING

Based on 30min chart, if 1200/1201 level holds, price could move up again and retest its yesterday's high level around 1212 or higher level. Breakout 1214 level, excitement could carry price up around 1219/1220 level. Whether ES can move high or not, it depends on early morning reports. If market doesn't like reports, price could dip into 1199.50 or 1195 level to search for support.
