One day up and one day down. The market really doesn't go anywhere. It consolidates by going sideways. Today is last day of May. We may see ES is hanging around equilibrium level 905 for the monthly closing.

ESM9 DAILY Chart

## 5. TRADING STRATEGY FOR May 28, 2009

GDP report will be out in the early morning. We may see ES attempt to breakout upside key level 916.25 in the morning session if the all reports are good. If ES succeeds to make breakout movement, price could be pushed up to the higher level 924.50. On a failure to breakout 916.25 line, it is possible for ES to go back down to 896-895 line or lower to 890-888 range before it bounces back up again. Nevertheless today closing price shouldn't be too far from 900 level.
